BERRIDGE COATED FELT CAPS

In order to help improve the flatness and overall weatherproof integrity of the felt underlayment used with Berridge architectural roofs, we have developed the **BERRIDGE COATED FELT CAP**. This cap is to be used with galvanized roofing nails or a coated fastener such as a galvanized or stainless steel pancake head screw to securely hold 30# felt underlayment to decking prior to installation of roofing panels. These caps are recommended for holding down felt to plywood under all Berridge roofing systems. These caps are specially manufactured to be fully compatible with Berridge architectural roofs and offer the following important advantages:

- Will not rust (G-90 Coated) or cause roofing panels to rust.
- G-90 Coated to Insure Compatibility with Decking & Roofing.
- Flat Caps -- will not "telegraph" or read through roof panels.
- Simple Installation
- Low Cost

Berridge Coated Felt Cap
24 Gauge, G-90 Galvanized
