

PRODUCT DESCRIPTION

SMOOTH ROUNDED CORNERS USING TAPERED HIGH SEAM TEE-PANEL & CEE-LOCK STANDING SEAM

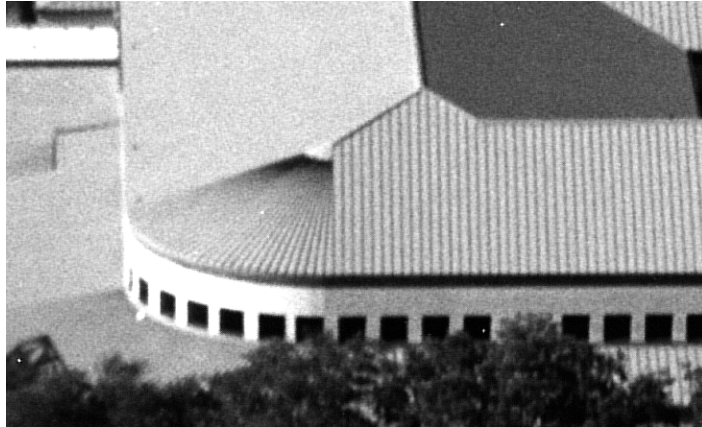

FIG. 1 - A smooth transition from straight Berridge Cee-Lock standing seam panels to tapered Berridge Tapered High Seam Tee-Panels provides an eye-pleasing rounded corner roof design.

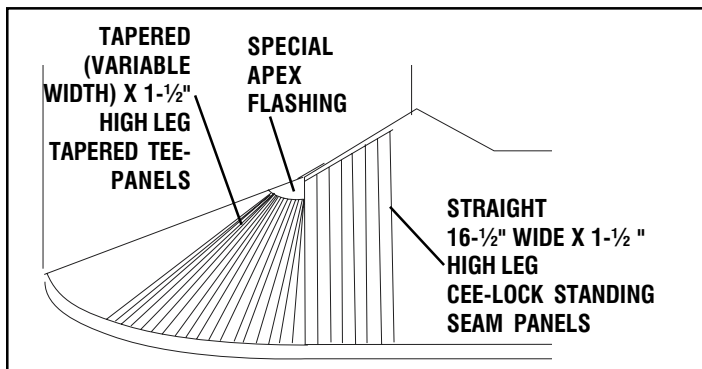

FIG. 2 - Leg heights of the Berridge Cee-Lock and Tapered High Seam Tee-Panel match up perfectly for a smooth transition.

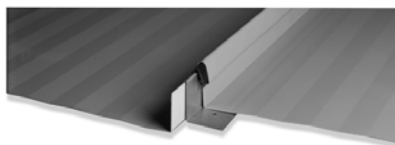

FIG. 3 - The seam configuration of Berridge High Seam Tee-Panel matches that of the Berridge Cee-Lock panel (below, FIG. 4)

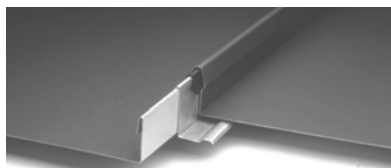

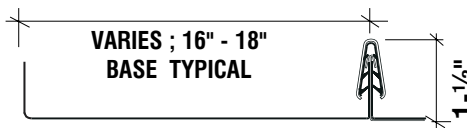

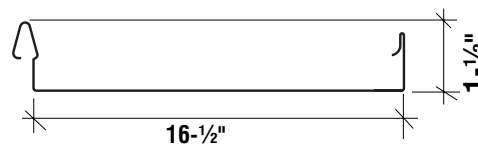

FIG. 4 - Berridge Cee-Lock, with its integral snap lock seam and 16-1/2" wide coverage is an aesthetic, economical roof panel.

BERRIDGE TAPERED HIGH SEAM TEE-PANEL

BERRIDGE CEE-LOCK PANEL*

***smooth, no striations (to match Tapered High Seam Tee-Panel)**

Rounded building corners pose special roof design problems - if only straight panels are used, segmented/hipped sections must be used to enable the panels to conform to the rounded corner. The result is usually quite unattractive and labor intensive to install, due to the need for hip flashing, special diagonal closures and sealant and bevel-cut panels of many different lengths.

Berridge offers a far more aesthetic and weather-tight solution through the use of Tapered Berridge High Seam Tee-Panels at the rounded corner roof area, smoothly transitions to straight Cee-Lock standing seam panels on either side of the curved corner. As shown in figures 3 and 4 at lower left, leg heights and seam configuration match up perfectly for a smooth visual transition from straight to tapered standing seam panel.

Straight (smooth, no striations) Berridge Cee-Lock standing seam panels (see figure 2 at left) are site-formed with the Berridge CL-21 portable roll former in continuous lengths with no leak-prone endlaps. Tapered High Seam Tee-Panels are also site-formed in continuous lengths with the Berridge SL-24 portable roll former.
