Nu-Tec

ROOFING CONTRACTORS, INC.

THE INSIDE STORY

Jack Berridge
Chairman
of the Board

This month's featured Berridge Licensee, Nu-Tec Roofing Contractors of Tampa, Florida epitomizes the commitment to excellence in customer service and technical skill displayed by today's "new breed" of roofing and sheet metal contractors. Nu-Tec's depth of talent in both field installation and office staff means that they are positioned to perform the type of challenging projects shown in this issue of the Berridge BY-LINE.

Projects like the bus terminal facility for the Pinellas Suncoast Transit Authority in St. Petersburg, Florida are beyond most roofing contractors' capabilities. Nu-Tec, backed by Berridge's powerful "Total Program", was able to field fabricate and install the special double-radius tapered panels to perfectly execute the architect's design concept.

Berridge is proud to be associated with companies like Nu-Tec Roofing Contractors who are the vanguard of the new millennium when it comes to advancing the art of architectural metal roofing design and installation.

Jack. A. Berridge
Chairman of the Board

Nu-Tec Roofing: Positioned for Growth through Superior Service

Nu-Tec Roofing Contractors' Tampa, Florida office is managed by Steve Kruse (Left), Executive Vice President of Sales and Estimating. Scott Perkins (Right) is General Superintendent and Sonny Burdine (Center) is Executive Vice President of Operations.

Nu-Tec Roofing Contractors, Inc. was founded in 1984 in Indianapolis, Indiana by Mike Hutchings with Bruce Bubenzer and Dorwin Burdine. By 1995 Nu-Tec had become one of the ten largest commercial/industrial roofing companies in the U.S. In 2000, Nu-Tec, along with six sister roofing companies formed New Millennium Roofing, Inc.

"The flexibility of the Berridge Program and products has positioned Nu-Tec to successfully handle complex jobs that others are reluctant to even consider!"

Nu-Tec's rapid growth has been spurred by their commitment to providing the best in customer service combined with a willingness to tackle the most complex projects such as those pictured in this issue of the Berridge BYLINE. As Steve Kruse comments: "The flexibility of the Berridge Program and products has positioned Nu-Tec to successfully handle complex jobs that others are reluctant to even consider!"

The unique Pinellas Suncoast Transit Authority project shown on page four of this issue, with its circular roof and double-radius tapered standing seam panels is an excellent example of Nu-Tec's ability to install highly complex projects. Nu-Tec employs over 150 installers, thirty of which specialize in standing seam metal roofs.
