MOSCOW MILLS, MO

THE INSIDE STORY

Jack Berridge
Chairman of the Board

Natsch and Company, Inc., a metal roofing and sheet metal contractor from Jefferson City, Missouri, has remained competitive in the architectural metal panel industry since the mid-eighties. Natsch and Company evaluated the practicality and profitability of purchasing a Berridge portable roll former and decided on the SS-14 roll former in 1987. Today, Natsch and Company owns and operates a 5400 square foot sheet metal shop, two Berridge roll formers and a crew of knowledgeable and highly skilled sheet metal craftsmen.

DLR Group, an award-winning integrated design firm, understands that in business, nothing separates Leaders from Followers like a shift in cultural ideology. The green, sustainable movement is gaining momentum around the world, but many firms remain reluctant to evolve their company's initiatives to meet customer demands for energy-efficient buildings. Since its establishment in 1966, DLR Group has executed sustainable design practices and environmental stewardship. Today, the desire to create renewable, environmentally-friendly architecture runs deep in DLR Group's company culture. Every project is designed with the LEED rating systems and USGBC project certification criteria in mind, exceeding both customer expectations and professional standards.

Jack A. Berridge
Chairman of the Board

NATSCH & Company was formed in 1984 to compliment its sister company, Weathercraft, Inc., who specialized in single ply rubber, built-up asphalt, slate, tile, and shingles. Natsch, an experienced and established residential heating, air and sheet metal company added a new dimension to Weathercraft, a standing seam metal roof division and a full sheet metal shop to fabricate gutters, coping, and all types of metal trim allowing the two companies to expand their expertise and company scope. Seeing the growing opportunity in the architectural metal industry, Natsch became a Berridge Licensee in 1987 after purchasing an SS-14 portable roll former. Project Manager, Joe Arnold noted, "Using Berridge portable roll formers to site-form straight and curved standing seam panels in continuous lengths gives us a competitive edge by allowing us

to control production times, minimize waste and shipping costs and offer our customers the assurance they need with Berridge's Platinum Watertightness Warranty." Natsch & Company, Inc. employs 16 full-time sheet metal craftsmen, maintains a fleet of installation vehicles and equipment including: Berridge Tee-Panel, Cee-Lock and Zee Lock portable roll formers, computerized folding machines, slitters, shears, lifts, cranes and gutter machines making them capable of handling any size project. The quality workmanship produced on numerous high profile projects across the state of Missouri in education, on correctional facilities and on government projects has been a key factor for Natsch's quality reputation in their territory.

Natsch credits its growth and success to the Office Staff, Roofers, and Sheet Metal Workers who perform quality work their customers have come to trust and expect. Natsch and Company, Inc. is a M/WBE company solely owned by Martha A. Fifer, President.

Project featured on front cover:

Established in 1966, DLR Group is an integrated design firm offering comprehensive expertise in architecture, engineering, planning, and interiors from its 15 offices across the country. As a member of the U.S. Green Building Council, the firm is driven by a company culture committed to responsible and sustainable design principles. DLR Group's design versatility is apparent with a primary focus in Corporate, Higher Education, Justice, and K-12 Education facilities.

DLR Group ranks No. 1 in criminal justice design, and also is the largest education design firm in the world as determined by *BD World Architecture* magazine. The Lincoln County Ninth Grade Center in Moscow Mills, Mo., is a prime example of DLR Group's commitment to effective, efficient and sustainable building design. DLR Group utilized Berridge Cee-Lock standing seam, FW-12 fascia and soffit systems and HR-16 wall panels for an aesthetic and durable solution. The use of these products is a testament to the versatility and sustainability of recyclable, architectural metal. Anticipating growth of the student body at the Ninth Grade Center, DLR Group followed its motto to listen, design and deliver on the expectations of its customer. The large, expansive walls of Berridge HR-16 wall panels shown in the bottom image on the facing page are designed to be removable and reusable, making way for future additions such as a competition gymnasium and a performing arts center on the opposite side. DLR Group's design is both economically and environmentally efficient, and is just one example of the firm's conscious effort to design responsibly.

The Design Team:

Seated: **Shannon Ellingson**, Associate (Interior Design) (L-R)
Lindsey Plant, Assoc. AIA, LEED AP, Associate (Architect)
Standing: **Kevin Greischar**, NCARB, Principal (K-12 Practice Leader) (L-R)
