ENCOMPASS

THE INSIDE STORY

Jack Berridge
Chairman
of the Board

Architectural sheet metal contractors who want to successfully compete in the high-tech construction market in the Silicon Valley area must have highly-trained employees and solid, professional organization. Encompass of Northern California (formerly Air Systems) certainly meets both criteria as evidenced by the impressive projects shown in this issue of BYLINE.

High profile corporate facilities such as those designed and built for the leaders in the prestigious Silicon Valley area demand creative architectural metal products and Encompass has proven its ability to deliver with the Berridge Total Program's wide range of curved, tapered and other panel offerings.

We congratulate Encompass for their progress in establishing Berridge as a distinctive name in architectural sheet metal in the Northern California market.

Jack. A. Berridge
Chairman of the Board

Assistant; Rear, L-R: Don Waller, Coordinator and Val Feinstein, Drafter.

When John Davis founded Air Systems in 1974, the company specialized in HVAC services. During the next twenty-seven years Air Systems would grow from a small firm with only two employees to one of California's largest companies with offices in San Jose, San Leandro, Santa Rosa and Sacramento. In addition to its HVAC mechanical services, Air Systems added mechanical and electrical contracting, process piping, service repair and architectural sheet metal to its list of products and services. In February 2000, Air Systems, along with several other sister companies was merged into Encompass, a 3.8 billion dollar provider of total facilities solutions and services.

Heading up the Architectural Sheet Metal division of Encompass is Mark Yeager, Director of Architectural Sheet Metal. Mark joined the company four years ago and swiftly formed an experienced staff to promote, design and install quality architectural sheet metal products. High-tech firms such as Cisco, 3Com and Silicon Graphics located nearby launched ambitious building programs which fueled the rapid growth of Air Systems' architectural metal division. A key element in Air Systems' success in meeting the exacting demands of its high-tech clients has been their relationship with Berridge Manufacturing Company and the Berridge Total Program. Mark Yeager puts it this way: *"The Berridge Total Program provides us with a high-profile product which offers the flexibility of both long-length curved panels and custom shapes such as tapered panels. Plus, with Berridge's coil program and site-forming equipment, we manufacture the panels as we need them — there's no delay or waste!"*

Today, the architectural sheet metal division of Encompass employs a staff of twelve and has offices in San Jose, San Leandro and Sacramento. In addition to the Berridge Model SS-14 portable roll

Above: Mark Yeager, Director, receives a "Customer of Distinction" award from Alan Stovesand, Berridge Western Region Sales Manager.

"The Berridge Total Program provides us with a high-profile product which offers the flexibility of both long-length curved panels and custom shapes such as tapered panels. Plus, with Berridge's coil program and site forming equipment, we manufacture the panels as we need them — there's no delay or waste!"

former they own, Encompass uses state of the art computerized folding, cutting and slitting equipment to fabricate all trim and accessory items required to complete the job. As the projects shown in this issue illustrate, Encompass has established a reputation of leadership in architectural sheet metal both in the Bay area and in Northern California.
