Unpainted Galvalume™ Steel
Fact Sheet

A Superior Building Material
ArcelorMittal Galvalume™ is a coated steel product that has proven its superior performance as a building material in extended field testing in a diverse range of corrosive environments. Its unique combination of durability, edge protection, and resistance to corrosion is at least twice that of galvanized steel.

ArcelorMittal produces Galvalume coated steel sheet in the US and Canada and is the exclusive producer in Canada. The Galvalume coating is an alloy composed of 55% aluminum and approximately 45% zinc by weight. It is applied on both sides of cold-rolled steel sheet using a precise continuous hot dip process. The result is a highly corrosion resistant coated steel that combines the barrier protection and extended durability of aluminum with the galvanic protection of zinc.

Galvalume also offers exceptional heat reflectivity properties, resulting in a lower energy load on buildings and improved interior comfort.

From an aesthetic perspective, the fine spangle and gentle sheen of unpainted Galvalume offers a very attractive appearance.

Product Characteristics

Proven Superior Corrosion Resistance
Galvalume steel sheet can be expected to provide at least twice the service life of traditional zinc-coatings of similar coating thickness under the same exposure conditions. This has been proven by actual exposure tests using flat coupon samples, conducted over 36 years in the U.S.A. and 15 years in Canada.

The tests covered a variety of environments ranging from rural to severe marine. The following chart, comparing the performance of Galvalume and galvanized of equal coating thickness, shows that Galvalume has at least twice the service life versus galvanized.

Superior Cut Edge Protection
The aluminum and zinc in the coating combine to prevent corrosion at exposed edges. The zinc component of the Galvalume coating provides galvanic cut edge protection, while the aluminum component remains as a continuing barrier to corrosion.

Heat Reflectivity and Solar Reflectance (Energy Efficiency)
Bare, unpainted Galvalume has undergone extensive testing by the Oak Ridge National Laboratory (ORNL), to determine its solar reflective performance. Test results have qualified Galvalume as an approved roof product by the U.S. EPA – ENERGY STAR Program, for both low-slope and high-slope applications.

On newly manufactured Galvalume, heat reflectivity was rated above the minimum U.S. EPA requirement of 0.65. For weathered roofs over three years of age, the overall solar reflectance also exceeded the minimum U.S. EPA requirement of 0.50 for maintenance reflectivity.

Enhanced Surface Treatment
ArcelorMittal offers a variety of surface treatments suited to specific manufacturing and application needs.

For unpainted applications, bare Galvalume Plus™ is available. Galvalume Plus has a clear, organic resin coating applied to both sides of Galvalume steel sheet, can be roll-formed without lubricants, and is delivered to the job site with an oil-free surface. See our Fact Sheet on Galvalume Plus for more information.

Unpainted Galvalume can also be passivated with a chemical treatment. With this treatment, Galvalume must be oiled with either vanishing or slushing oil.

If color is specified, Galvalume steel sheet can be ordered as prepainted coil. This option offers an additional layer of paint protection in a wide assortment of attractive colors and paint systems. See our Fact Sheet on Prepainteted Galvalume Steel for more information.

Applications
Galvalume has many proven applications in Commercial, Industrial, Institutional, Agricultural, and Residential Construction.

• Low-slope structural roofing
• High-slope architectural roofing
• Cladding and siding
• Quonset Buildings
• Pre-engineered Steel Buildings
• Building Accessories
• Construction Tubular
• Structural Steel Framing
• Appliance Components
• Automotive Parts
Points to Remember

Compatibility with Dissimilar Metals
All materials that can be used in contact with galvanized steel sheet can be used with complete safety in contact with Galvalume. However, as with galvanized, contact of lead or copper with Galvalume steel must be avoided, as it can result in accelerated corrosion.

Galvalume and galvanized can be combined on the same building project, although it is not advisable because galvanized will likely exhibit corrosion before Galvalume. As a design practice, when both materials are in contact, always use Galvalume downstream from unpainted galvanized steel, otherwise accelerated corrosion of the galvanized can occur.

Handling and Storage
To preserve the surface, handling should only be carried out using clean, dry gloves. Do not slide sheets over rough surfaces or each other.

As with galvanized or painted steel products, bundles of Galvalume steel sheets or products made from Galvalume steel in all finishes must be kept dry in transit. After transit, material should then be covered and stored off the ground, at a slight angle, to prevent water or condensation from being trapped between adjacent sheet surfaces.

If the bundles become wet, sheets should be separated, wiped with a clean cloth without delay and then placed so that air circulation completes the drying process. These procedures are recommended to avoid possible deterioration of the coating, which could result in non-uniform appearance.

Joining and Sealing
Recommended fasteners to be used on Galvalume steel sheet should have washers made of Neoprene or a similar material. (See table below). Fasteners containing lead or copper should not be used. Lead headed nails and lead washers should also not be used on Galvalume.

For sealing, neutral cure silicone sealants should be used. Sealants containing acetic acid or amines should not be used on Galvalume steel. Check with your sealant supplier for brand name recommendations.

Guidelines for Selection of Fasteners for use with Prepainted Galvalume Steel Sheet

All Berridge applied colors are premium fluoropolymer coatings produced with full strength Kynar 500® or Hylar 5000® resin. This coating affords maximum exterior durability due to its outstanding weatherability and resistance to ultraviolet radiation. The factory applied coating is fully warranted for 20 years against cracking, peeling and fading (not to exceed 5 N.B.S. units). These are the highest quality exterior finishes available among competitive products.

Berridge Metallic Finishes

Metallic colors are processed and finished on Berridge’s continuous coil-coating line. These proprietary finishes are available for all factory products, flat sheet and coil. Flat sheets and coils in metallic finishes are available to sheet metal companies for fabrication of special profiles, shapes or flashing. Metallic colors are directional and paint lot sensitive. Large orders should be placed at the same time to avoid mixing paint lots. Berridge Metallic Finishes* include:

- Copper-Cote™
- Champagne
- Preweathered Galvalume®

* Metallic and Premium Finishes require a nominal surcharge.

Acrylic-Coated Galvalume

Acrylic-Coated Galvalume® (ACG) is a coated sheet product that combines the corrosion resistance of Galvalume® steel sheet with a clear acrylic coating that is applied over Galvalume® substrate. The surface treatment is essentially invisible but it provides excellent characteristics to enhance the fabrication, performance and aesthetics of the installed Galvalume. These enhancements include: good roll-formability without the need for oils, excellent transit and field-storage performance without staining, dramatic decrease in finger printing or foot printing during installation and long term surface brightness when exposed to the environment. It is applied at the mill by roll-coating a uniform, thin film of a water-base acrylic solution onto both surfaces of the sheet.

Coating System

Protective Strippable Film (painted material only)
0.75 ± 0.05 mil Kynar 500® Hylar 5000® top coat
0.20 ± 0.05 mil primer coat
24 gauge or 22 gauge Galvalume® or 0.032 or 0.040 Aluminum substrate
0.35 ± 0.05 mil total dry film thickness for primer coat (non-metallics only)
Beige urethane backer coat (all colors)

Notes:
1. Special colors and finishes are available. Please consult Berridge for pricing and delivery.
2. Berridge metallic and premium finishes require a nominal surcharge.

Testing results for Kynar 500®/Hylar 5000® coat coating applications:

- **Spectral Gloss**: (ASTM D-523) Low and medium gloss only
- **Color Uniformity**: (ASTM D-2244) Color controlled both instrumentally and visually
- **Dry Film Thickness**: (ASTM D-7091, ASTM D-1005, NCCA 11-13, 11-14, 11-15) Prime 0.20 ± 0.05 mil, Topcoat 0.75 ± 0.05 mil
- **Hardness**: (ASTM D-3363, NCCA 11-12, Eagle Turquoise Pencils) HB Aluminum
- **Adhesion (X-Cut)**: (ASTM D-3359) No adhesion loss
- **Adhesion (Cross Hatch)**: (ASTM D-3359) No adhesion loss
- **Abrasion Coefficient**: (ASTM D-968) 100 liters/mil topcoat
- **Direct Impact Flexibility**: (ASTM D-2794, Gardner Impact Tester, 1/10” Distortion) Excellent, no removal
- **Reverse Impact Flexibility**: (NCCA Spec. 11, ASTM D-2794, Gardner Impact Tester, 5/8” ball Impact force in inches pounds equal to metal thickness) Excellent, no cracking or loss of adhesion
- **Formability**: (ASTM D-4145, 180° T-Bend on 1/8” sheet steel) Passes 2000 hours on Galvalume® and 4000 hours on Aluminum
- **Acid Resistance**: (ASTM D-1308, Proc. 3.1.1, 10% Sulfuric Acid spot test, 24 hour exposure) Excellent, no effect
- **Salt Spray Resistance**: (ASTM B-117) Passes 2000 hours on Galvalume® and 4000 hours on Aluminum
- **Alkali Resistance**: (ASTM D-1308, Proc. 5.2, 10% Sodium Hydroxide, 24 hour exposure) Excellent, no effect
- **Detergent Resistance**: (ASTM D-2248, 72 hours immersion in 3% solution at 100°F) Excellent, no effect
- **Resistance to Acid Pollutants**: (ASTM D-2244, 20 years, 45° South Florida) Maximum 1% loss
- **Humidity Resistance**: (ASTM D-2247) Passes 2000 hours on Galvalume® and 4000 hours on Aluminum
- **Resistance to Acid Pollutants**: (ASTM D-1308, Proc. 3.1.1, 24 hour exposure 10% HNO3 vapors) Excellent, no effect
- **Weathering - Color Retention**: (ASTM D-2244, 20 years, 45° South Florida) Maximum 5 NBS units color change
- **Weathering - Chalk Resistance**: (ASTM D-4214, 20 years, 45° South Florida) Not worse than No. 8 rating
