

# The Venue at The Ballpark

## DOUBLE RIB

## PROJECT DETAILS

- Panel: Double Rib
- Color: Acrylic-Coated Galvalume®
- Architect: BOKA Powell
- Installer: Quality Architect Metal & Roofing

**Double Rib**

The Venue at The Ballpark is located in Birmingham, Alabama. This complex features stylish, upscale apartments, extensive amenities and courtyards overlooking Regions Field, providing the best in downtown living.

Designed by BOKA Powell, the modern apartment complex used Berridge Manufacturing Company's Double Rib Panel in Acrylic-Coated Galvalume®. Double Rib is typically used for roof applications. In this instance, a non-traditional application was chosen for Double Rib. The 137 squares of Double Rib were installed by Quality Architectural Metal & Roofing on the exterior walls creating a nice contrasting pattern and color combination to the other painted exterior walls. Double Rib is UL-90 wind resistance rated and UL-2218 impact resistance rated. Double Rib is also Florida Product approved making it a good choice for coastal environments.
